

Annie Rao (Ying Rao)

IT Project Manager | Enterprise Digital Transformation | E-commerce & Healthcare SupplyChain | Business-Finance Integration

WeChat: AnPolaris21 Email: y_rao@foxmail.com English: CET-6

Professional Summary

IT Project Manager with 8 years of experience in enterprise digital transformation, system integration, business-finance integration, supply chain systems, CRM, OMS, ERP, data platforms, and AI-enabled efficiency improvement. Experienced across project initiation, requirement analysis, solution design, resource planning, risk and issue management, vendor collaboration, SIT/UAT acceptance, go-live, and post-launch review. Recently involved in information management for a small medical device company, with hands-on understanding of medical device supply chain collaboration among manufacturers, distributors, logistics, inventory, end customers, after-sales service, and settlement.

Core Strengths

- End-to-end IT project delivery: initiation, scope and planning, resource coordination, development tracking, SIT/UAT, go-live windows, issue tracking, and retrospective documentation.
- Complex system integration: OMS, ERP, CRM, WMS, PIM, data platform, reconciliation center, external channels, API/RPA tools, data flows, interfaces, and business boundaries.
- Business-finance integration: able to connect business requirements with financial rules across orders, settlement, cost, write-off, invoicing, general ledger, and month-end closing scenarios.
- Cross-functional and vendor management: long-term coordination with finance, procurement, operations, customer service, IT, testing teams, external platforms, and vendors; established PRD standards, SOPs, issue libraries, and delivery standards.
- AI First working style: delegates status sync, progress collection, meeting minutes, daily/weekly reports, and management reporting to tools and AI, freeing time for information judgment, solution thinking, and decision support; familiar with Agent-Feishu integration and office automation exploration.

Work Experience

Small Medical Device Company | IT Information Manager (Part-time) 2025.09 - Present

- Responsible for information management, data analysis, lightweight system setup, and AI-enabled efficiency exploration; supported business leaders in supply chain collaboration, operational data, and internal management process mapping.
- Mapped medical device supply chain collaboration among manufacturers/brands, agents or distributors, logistics and warehousing, end customers, after-sales service, and settlement; identified key data points across orders, inventory, pricing, payment collection, and service.
- Built lightweight information management logic around customers, products, orders, inventory, progress, issues, and reports to reduce delays caused by manual spreadsheets and fragmented communication.
- Applied an AI First working method by moving status sync, progress collection, meeting notes, weekly reports, and management report drafting to tools and AI, shifting personal effort toward judgment, solution design, and decision support.

NET-A-PORTER (Luxury E-commerce JV of Richemont and Alibaba) | IT Project Manager 2021.11 - 2025.09

- Managed enterprise digital platform projects across finance ERP, OMS, CRM, data platform, channel integration, membership operations, and AI innovation.
- Coordinated finance, procurement, operations, customer service, product/technology, testing, and vendor teams; delivered 10+ projects annually on schedule.
- Led business-finance integration across four procurement models: self-operated in-warehouse, self-operated non-warehouse, consignment in-warehouse, and consignment non-warehouse; connected procurement, orders, reconciliation, settlement, ERP, and WMS processes.
- Led sales channel expansion projects connecting Douyin, Xiaohongshu, mini-programs, consignment platforms, and enterprise middle platforms, while landing order, inventory, after-sales, CRM, customer service, and finance requirements.
- Managed CRM and membership operation requirements, including membership integration, points, sign-in gifts, first-order gifts, gifting, and EIP benefits; handled requirement review, scheduling, development, UAT, and go-live.
- Key outcomes: handled 400+ ERP requests/issues and 100+ CRM requests/issues; optimized vendor collaboration SOPs and reduced vendor collaboration complaints by about 80%.

Shanghai Cyclone Robotics | Project Manager 2020.11 - 2021.11

- Managed RPA project portfolio delivery for banking, manufacturing, and retail clients, covering requirement research, solution confirmation, delivery tracking, and customer success.
- Managed resources for a 60+ member project team and dynamically allocated people based on project priority and delivery risk, improving team efficiency from about 85% to over 92%.

- Focused on 12 RPA projects with total contract value of around RMB 8 million; delivered 100+ automated workflows and supported renewals or follow-on cooperation.

OpenText Covisint | Product Owner 2019.03 - 2020.11

- Standardized project management processes, milestone tracking, resource calendar scheduling, risk and quality management, and go-live window planning.
- Connected with SAIC-GM data middle platform and built a supplier data-sharing platform; led a zero-to-one jewelry supply chain collaboration platform covering orders, inventory, logistics, settlement, store demand, and master data.
- Managed 200+ projects launched on schedule and documented cross-team delivery SOPs and key milestone quality standards.

Shanghai Tianma Microelectronics | Project Manager / Requirement Analyst 2017.07 - 2019.03

- Responsible for CRM requirement research, user requirement documentation, prototype design, requirement prioritization, agile iterations, and project progress reporting.
- Supported CRM requirement iterations for China and Germany users, serving sales teams across customer lifecycle management scenarios including opportunities, projects, orders, revenue, and competitor analysis.
- Closed 300+ items, including 48 new requirements, with an approximate requirement go-live rate of 93%; received two outstanding employee awards and one promotion.

Representative Projects

NET-A-PORTER AI Personal Stylist | Project Manager | 2024.07 - 2024.11

An LLM, multimodal model, and recommendation algorithm based project that provides conversational search, occasion-based styling suggestions, and personalized product recommendations.

- Coordinated algorithm, product, data, backend, testing, and operations teams to deliver conversational search, recommendation optimization, multi-turn dialogue, and performance improvements in phases.
- Managed 17 interface integrations, 1,018 Chinese/English test cases, 147 defect closures, and key metrics including response speed, intent recognition accuracy, and concurrency.
- Outcome: completed AI tagging for about 260,000 unstructured product records; improved AI response time from about 60 seconds to 3 seconds, intent understanding accuracy from about 50% to 95%, and concurrency from 2 QPS to 30 QPS.

NET-A-PORTER Business-Finance Integration Platform | Project Manager | 2023.01 - 2024.08

Rebuilt the collaboration chain across procurement, orders, reconciliation, settlement, ERP, WMS, and data platform from a finance perspective, resolving write-off, settlement, cost, and month-end efficiency issues under multi-channel and multi-procurement models.

- Delivered in phases across master data, procurement center development, reconciliation center transformation, reverse procurement processes, ERP-HUB integration, data platform integration, ERP receivables, and VMI settlement.
- Coordinated OMS, reconciliation center, procurement center, ERP, WMS, and vendor teams; clarified OMS ownership for order fulfillment and ERP ownership for standardized financial data and finance management.
- Outcome: achieved 100% online handling for four procurement models; improved consignment processing speed by about 40%; reduced reconciliation errors by about 95%; supported 10,000+ daily orders in the reconciliation center with settlement price error rate below 0.05%.

NET-A-PORTER Douyin Third-Party Sales Channel Launch | Project Manager | 2022.01 - 2022.06

Led zero-to-one Douyin e-commerce channel integration covering store setup, products, orders, inventory, after-sales, customer service, finance, and membership operation chains.

- Used phased SOW and small-batch agile delivery to prioritize store qualification, product mapping, inventory sync, order processing, and after-sales closed loop.
- Organized business, external platform, development, testing, customer service, and finance teams for themed reviews and training to reduce delivery risk caused by unfamiliar platform rules.
- Outcome: launched the Douyin platform from zero to one and shortened the core process go-live cycle by about 30%.

Shanghai Cyclone RPA Project Portfolio (5 Banks, 6 Manufacturing Companies, 1 Retail Client) | Project Manager / Requirement Analyst | 2020.05 - 2021.11

Managed 12 projects during the role, including client visits and requirement research across 10 cities in 2021. RPA workflows simulated business users' operations and automated high-frequency, rule-based work, with NLP and CV capabilities applied in finance and business departments.

- Responsible for project delivery and requirement management from initiation, planning, execution, and monitoring to acceptance.
- Handled customer success, identified further customer needs, and promoted follow-on cooperation and renewals.
- Outcome: delivered 100+ workflows with total contract value of RMB 4 million+; 6 projects developed further cooperation opportunities through successful delivery and customer service.

SGM Integrated API Application Platform | Project Manager / Requirement Analyst | 2020.03 - 2020.10

A supplier-facing application and data-sharing platform based on GM's DEEP middle platform, covering master data, planning and demand management, ordering and delivery, part change management, inventory, supplier risk, and supply chain management, with 40+ functional modules and 150+ API interfaces.

- Responsible for zero-to-one product design, supplier collaboration scenario analysis, functional boundary definition, requirement review, solution confirmation, and development planning.
- Tracked development implementation progress, coordinated resources, managed issue tracking, implementation quality assurance, and project quality control.

- Outcome: platform entered formal production use and stable optimization; nearly 20 suppliers adopted the platform within four months after launch, with average contract value of about RMB 80,000 per supplier.

Education & Certifications

- Shanghai Jiao Tong University | Master of Engineering Management (MEM, thesis stage) | 2023.09 - Present
- Nanchang Hangkong University | B.E. Communication Engineering | 2013.09 - 2017.07
- ACP Agile Certified Practitioner; CET-6; proficient in Jira, Confluence, ZenTao, Visio, Axure, SQL, and BI data platforms.
